Release Note for VigorPro Alert Notice

Firmware Version: 1.0.0
Built Date: September 19, 2010
Applied Operation System: Mac OS X

The VigorPro Alert Notice is an UDP (Syslog) based utility that supervises the receiving and parsing of packets, interprets format for the message in the packets, and shows the alert notice on a popup window. It makes the security information easy for users. It supports the following Alert Types: AI Attack, AV Attack and Block.

The tool can also be used to do 'Authentication' with Vigor router for access management. Thus, the administrator can control Internet access for the whole network.

New Features

- Support to show notice message while the host is under attack.
- Support recording current log message to the disk.
- Support authentication with Vigor router (which should have 'User Management' function).
- Perform auto run when the system starts up.
- Support to show current authentication status.

Improvement

- None

Known Issue

VigorPro Alert Notice Utility might be limited by some special firewall settings on Vista. The customers should be reminded about enabling this utility in firewall exception items.
