

VigorManager Quick Guide

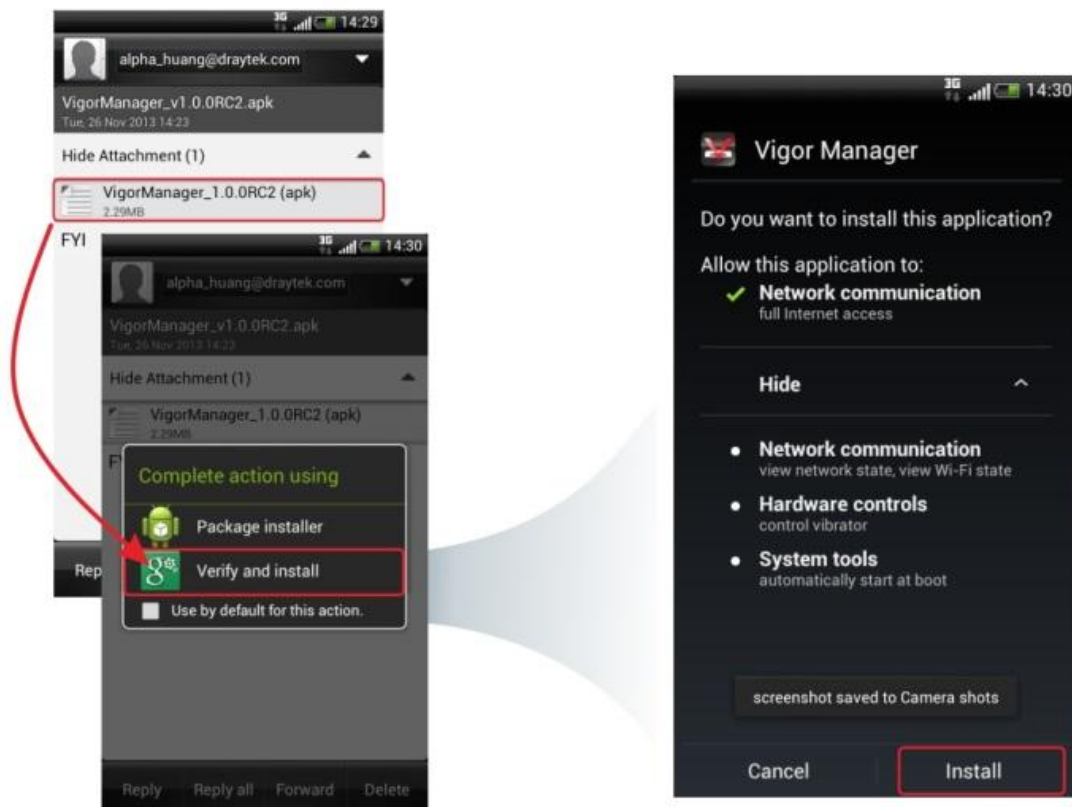

VigorManager is the first mobile apps of DrayTek Corp. launching for Android phone. By using VigorManager, customers can manage **Vigor2860** and **Vigor2925** with latest firmware from **v3.7.3.x**. We recommend you to run it on smartphone with **Android 4.0** or latest version because the others do not be tested in detail. Your ideas, issues or bugs are welcomed to mail to marketing@draytek.com to make it more friendly and aesthetically, and then we hope that it will become a tool to assist you promote routers.

[Note]

1. Vigor2860 and Vigor2925 series are supported.
2. Only one device can be managed.

⊕Startup

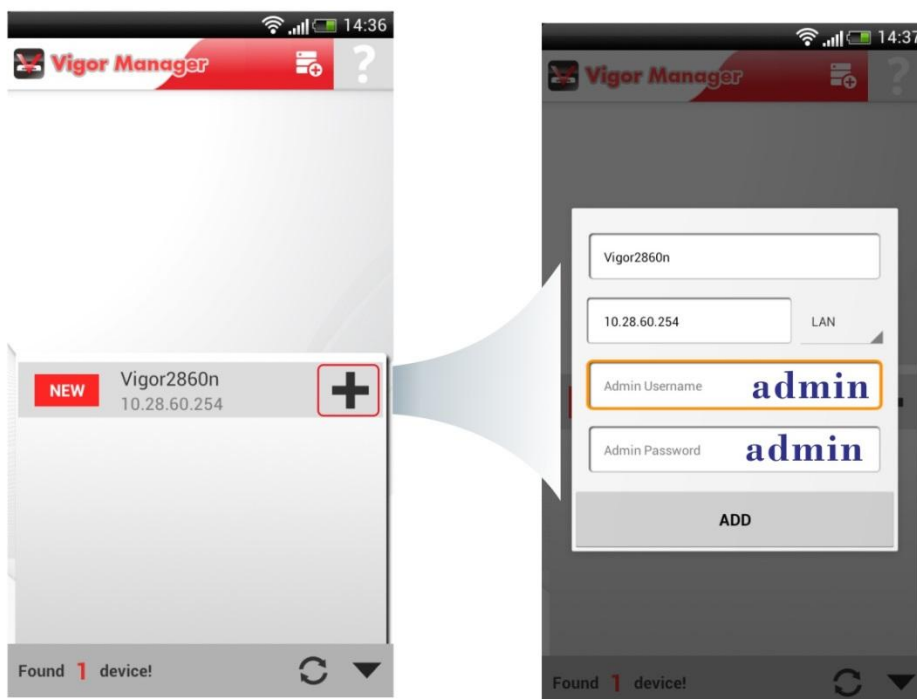

- A. Downloading VigorManager_v1.0.0RC3.apk with your smartphone via a validate mail account and then install it.

- B. Enable wireless function of your smartphone and hook onto a Vigor router, and then running VigorManager.

- C. If there is a Vigor router in your private network, it will show the numbers of devices was found. To login the device you need to input administrator's username and password, it is the same as you login router via browser.

D. The GUI Introduction

===Suggestions & Comments are welcomed===
